In the C programming language, data types are declarations for memory locations or variables that determine the characteristics of the data that may be stored and the methods (operations) of processing that are permitted involving them.. The C language provides basic arithmetic types, such as integer and real number types, and syntax to build array and compound types.

A C preprocessor is a statement substitution (text substitution) in C programming language. It instructs the C compiler to do some specific (required) pre-processing before the compilation process.. When we compile a C program, C preprocessor processes the statements which are associated with it and expand them to make the code for further compilation.

- [Instructor] Welcome to this course on data structures and algorithms. In this course, we will learn about some of the commonly used algorithms and data structures. We will start by learning about how to analyze algorithms then move on to talking about arrays, which is an ingrained data structure in most of the programming languages. Then we will learn some simple sorting algorithms, like ...

"IRRE has been an invaluable resource and partner as we implement a "standards based" curriculum at Girard College. Their experience, insight and guidance have been particularly helpful to our faculty, administrators and other stakeholders, including parents and students, as we implement the Common Core State Standards (CCSS).
