For example, quality indicators are relying on the results from quality measurement. This handbook distinguishes three levels of data quality assessment. On the first level, the complex information obtained

from measurement of processes and products has to be selected and structured in order to become meaningful for data quality assessment.

Handbook on Data Quality Assessment Methods and Tools

Accordingly, Sadiq structured this handbook in four parts: Part I is on organizational solutions, i.e. the development of data quality objectives for the organization, and the development of strategies to establish roles, processes, policies, and standards required to manage and ensure data quality.
